

sensible-browser

VIA: *man*

sensible-editor, sensible-pager and sensible-browser make sensible decisions on which editor, pager, and web browser to call, respectively. Programs in Debian can use these scripts as their default editor, pager, or web browser or emulate their behavior.

USO: `sensible-browser <PAGINA_WEB>`

Permite lanzar el navegador por defecto para abrir el sitio web indicado.

docker pull

VIA: <https://docs.docker.com/engine/reference/commandline/pull/>

Pull an image or a repository from a registry

USO: `docker pull [OPTIONS] NAME[:TAG|@DIGEST]`

Descarga una imagen determinada.

docker run

VIA: <https://docs.docker.com/engine/reference/run/>

Docker runs processes in isolated containers. A container is a process which runs on a host. The host may be local or remote. When an operator executes docker run, the container process that runs is isolated in that it has its own file system, its own networking, and its own isolated process tree separate from the host.

USO: `docker run [OPTIONS] IMAGE[:TAG|@DIGEST] [COMMAND] [ARG...]`

Permite lanzar un contenedor Docker
